STATEMENT OF PURPOSE: APPLICATION FOR IIITH LATERAL ENTRY

Computer Science is the science of today and is defining the future of all technical spheres of our lives, and perhaps, this is the reason why I was allured by CS a lot. When it comes to Computer Science, I specially like to mention my first experience with coding, which was four years ago. I was amazed to see such a strange language('java') which I was, at that time, unable to comprehend. I used to wonder when teachers said that that was the way to 'talk to & instruct your computer'. But things got better & better as my understanding about coding improved. I realized how complex real world problems can be solved by just a few lines of efficient logic.

With the commencement of my bachelors I learnt C & C++, which was a nice experience for me.I also heard a lot about Python & found Python a much more interesting language.Currently I am working on android & plan to make a project on the same with a friend of mine.The process is challenging but we are working hard & look forward to successful completion of our project.

The prime cause behind my application for lateral entry in IIT Hyderabad is adequately explained by the fact that this college has a supreme status among other colleges in   our country & provides the best quality education in the field of computer science.Completing my bachelors & research in such a prestigious institute will really be helpful for my bright career & my passion for coding.
